Gait: Normal

[Non Focal on Limited neurological exam](#)

**Diagnoses**

Other fecal abnormalities - R19.5, Primary diagnosis

Lymphoproliferative disease NOS - D47.9

**Assessment & Plan**

64 Y male is here to consult for colonoscopy.

Will schedule the patient for an urgent colonoscopy given the positive cologuard test. He is scheduled for bone marrow biopsy next Thursday for suspected lymphoproliferative disorder.

The risks, benefits and alternatives of the procedure were discussed in details. The risks include and are not limited to bleeding, infection, perforation and sedation risks (cardiopulmonary compromise and allergic reaction to medications). All questions were answered.

Timothy Polidan understood the risks and provided written informed consent. The preparation instructions were given and explained in details. The procedure will be scheduled as soon as possible. I will follow up with the patient after the procedure is performed.

32 minutes is the total time spent on this patient for this encounter including face-to-face and non-face-to-face time minutes preparing to see the patient, reviewing history, performing medically appropriate evaluation and or examination, counseling patient, ordering medications and procedures, documenting, information in the medical record. All activities are not separately recorded.

Thank you Rebecca Churchfor allowing me to assist in this patient's care.

**Prescription**

Sutab 1479-225-188 MG Oral Tablet: take as directed for colonoscopy, Oral, Start 08/18/2023, End 08/19/2023, Qty 1 Kit(s) For 1 Day(s)
